RESEARCH PAPERS

Job Market Paper:

"Intra-household Decision-making and Women's Labor Market Participation in a Developing Economy" [Accepted, Journal of Development Studies]. (with Radchenko, N.). *Link here (draft version).*

Abstract: This paper examines how intrahousehold decision-making relates to married women's labor force participation in a developing economy. It develops a conceptual framework that captures the trade-off between household economic surplus and the nonmonetary costs of the wife's employment. The framework distinguishes between a husband-cost-dominant model, consistent with stronger traditional norms, and a wife-cost-dominant model, consistent with greater women's agency. Using decision-making reports from both spouses, the chapter then empirically tests how household decision-making patterns are associated with women's labor market participation. The findings show that discrepancies between spouses' reports are systematic, with women reporting greater involvement than their husbands' reports, highlighting the importance of incorporating both perspectives. The results support the husband-cost-dominant model and suggest that the husband's disutility from his wife's employment outweighs her own work preferences. Findings also indicate that non-monetary costs outweigh the income effects and reveal the persistence of social norms surrounding Indonesian women's labor supply across time and birth cohorts.
